

The Institute for Student Achievement: Your Partner in Transforming Education

ISA's improvement approach is evidence-based and driven by principles derived from the research on effective schools. The evidence of ISA's work resulted in it earning the U.S. Department of Education's approval as an evidence-based, whole school reform for high schools, entry into the federal What Works Clearinghouse, and approval for school improvement funding.

We tailor our services to meet your needs

We work with schools and districts to determine delivery methods that best meet the unique needs of client and context. Our systems of support include:

Professional Development

Hybrid/Virtual Learning

Team Meeting Facilitation

School Principal Network

Institute and Staff Retreat Design

Content Area Coaching

Leadership Coaching

Meeting Facilitation

Board of Education Retreats

Strategic Planning

Content Coaching

ISA coaching helps teachers increase student engagement and improve learning in all subject areas. ISA has had proven success in support of African American males, Hispanic students, English learners, and students with special needs. Coaches have expertise in a variety of subject areas, and our coaching increases teacher capacity to meet the developmental and social and emotional needs of students.

Leadership Coaching

ISA's job-embedded leadership support enhances leaders' strategic and organizational capacities and skills. ISA coaches have been there—from school leader to superintendent – and our coaches do not profess answers but provide processes for leaders to find their way and their voice when tackling student outcome data, capacity issues, master scheduling, school budgets, professional development opportunities, and more.

Monitoring, Evaluation, & Research

ISA monitoring, evaluation, and research (MER) services offer schools and districts the practical data and information they need to make effective and timely organizational and instructional decisions. We provide customized processes and tools for conducting an equity audit, assessing school and classroom climate, monitoring teacher implementation of research-based instructional practices, and examining patterns in student outcomes.
